News Release

US LAUNCH OF AIR OPUS® CAMPER AT ISE SACRAMENTO

OPUS® Camper has announced that their new AIR OPUS inflating camper will be debuted at the ISE Sacramento Sportsman Show this week from the 19th - 22nd January 2017.

The AIR OPUS® is set to revolutionise camping with its use of air pole technology, which converts a compact 13.5' trailer into a luxury six-berth family camper in less than 90 seconds.

Air Tent technology will remove any need for traditional poles to erect the camper, reducing total setup time from around 15 minutes to just five. An electric pump is fitted inside the camper, so all it takes is a press of a switch for the air tubes to work their magic whilst you head inside to complete the interior setup.

Air pole technology is a relatively new concept in here in the USA and the AIR OPUS is the first appearance of this technology on a folding camper/ trailer tent. Demonstrations of the new Air tent technology will be run throughout the upcoming show.

AIR OPUS® made its global debut at Caravan Salon, Dusseldorf 2016, and is the latest enhancement to the OPUS® dual-fold camper, designed to offer luxury camping for thrill-seeking adventurers everywhere.
